

NOTICE

It is strongly recommended that the battery **NOT** be installed or connected until the time of sale to the end user. This will ensure that the battery has not been discharged through low current draw over time, or through short engine starting cycles. This battery has been fully charged and tested at the American Sportworks[®] facility prior to shipment, however, all batteries have an expected shelf life. The duration of time between receipt and final sale of the vehicle will affect the level of charge left in the battery. A low current (2amp max) trickle charge may be required prior to installation if this battery has been stored for an extended period of time. **Further questions regarding this matter should be directed to the American Sportworks[®] customer service hotline at 1-800-643-7332.**
